# For the tech. Not because anyone asked.

The brand and system behind forthe.tech, Afsal Ali's open ledger of software built in public. Part one is the brand: why it exists, who it's for, where it stands. Part two is the system: the logo, colour, type, components, motion and voice the site is built from.

PART 01 · BRAND

| | | |
|---|---|---|
| 1.1 | The brand | 2 |
| 1.2 | Mission and values | 3 |
| 1.3 | Audience | 4 |
| 1.4 | Positioning and personality | 5 |
| 1.5 | Evolution | 6 |

The logo has its own guide: what it shows, how it's built, every version and file. Section 2.2 summarises it.

PART 02 · SYSTEM

PART 01

# Brand

What forthe.tech is, who it's for, and where it stands.

## 1.1 The brand

### forthe.tech is where Afsal Ali builds small, useful software with each new tool that ships, and publishes what happened.

It started when the wall between having an idea and building it came down. Around a full-time job and family in Dubai, every new tool gets tested the same way: by building something that takes real friction out of someone's day. The site is the ledger of those builds.

THE ONE-SENTENCE TRUTH

**Every new tool gets tested on a real problem, and the result goes on the record.**

**What sits under the brand**

#### The site

www.forthe.tech. Home, Work with a page per build, Thesis and About.

#### The builds

16 projects from 2025 and 2026, Doomscholar to Bodhi Pomodoro. Each keeps its own name and look inside the product.

#### The dispatches

Essays published on the site. Dispatch No. 01 is The Energy Ledger.

**How they relate.** One person, one shelf. The builds are the proof, the dispatches are the thinking, and the site holds both. forthe.tech is the shelf the builds sit on, not their parent brand. Inside a product, the most it carries is a plain text link in the footer: "Built by Afsal Ali · forthe.tech". Never the logo.

| 16 | 2025–26 | Dubai | 1 |
|---|---|---|---|
| builds on the shelf | years they were made | where they're made | builder, around a day job |

# 1.2 Mission and values

MISSION

Test every new tool by building something useful with it, and publish the result in the open.

WHY

Tech is never the moat. What it alters in someone's real, physical day is.

From The Energy Ledger, Dispatch No. 01

**Values, written as things that get done**

Each one has a test you can run on any page.

| | |
|---|---|
| Built, then said. | A build goes on the site only when there's a working link or a recording of it working. No roadmaps, no "coming soon". **Test:** every project page has an Open, Source or video above the fold. |
| Made for someone. | Every build names who it's for: a wife who is a pharmacist, friends who are physiotherapists, patients, or just me. If nobody would use it, it doesn't ship. **Test:** the "for" line is filled in. |
| Intention over novelty. | Compute is energy, and every prompt spends it. Build because it removes friction from a real day, not to show off a model. **Test:** the case study opens with the problem, not the tool. |
| In the open. | Source linked wherever it can be. Status said plainly: live, in beta, headed for the app stores. **Test:** no claim on the page that a visitor can't check. |
| Curiosity, not obligation. | No client, no deadline, nobody asked. The work picks itself because the question is interesting. **Test:** nothing on the site reads like a pitch or a sales page. |

# 1.3 Audience

Four kinds of visitor, each arriving for a different reason. Every one of them comes with a design consequence: something the site must do, which section 2 makes specific.

## Curious builders

Peers who build with AI tools; developers; people trying the same tools.

**Want:** how it was made, what the new tool was actually good for, the source.

**So:** every project page carries "How it was built", the stack as chips, and a Source link when the code is public.

## People deciding to work with Afsal

Hiring managers, founders, collaborators. Usually arrive from LinkedIn, on a phone.

**Want:** proof of range and of finishing, in under a minute.

**So:** the first screen says what gets built and how many; each case study opens with the problem in one paragraph; share cards stay legible at feed size.

## The people the tools are for

Pharmacists, physiotherapists, patients, home cooks, learners. Not here for the story.

**Want:** the tool, now, and to understand it in one glance.

**So:** the "Open live" button sits above any essay text; the first line says what the tool does in plain words, no jargon.

## Readers

People who come for the dispatches and the thinking behind the builds.

**Want:** a long read that's comfortable on any screen.

**So:** serif headings, body at 16–18 px, a measure of 60–75 characters, and nothing moving inside the reading column.

**What they share**

Design for a phone first, and for a visit of seconds, not minutes. So every page leads with the thing itself and keeps tap targets at 44 px or more. Languages: English only. The Arabic-language builds (PharmaRab, PhysioArab) handle Arabic inside their own products.

# 1.4 Positioning and personality

## Not a portfolio. Not an agency. Not a startup.
## A working notebook, kept in public.

POSITIONING

For people curious about what new tools can really do, forthe.tech is the open ledger of one builder testing each one on a real problem: shown working, never pitched.

**If it were a thing** An engineer's bench notebook left open on the desk: dated, specific, a little obsessive, and never trying to sell you anything.

**Three words**

### Curious

Starts from a question. Headlines can be questions answered: "Why this exists."

Never: "We're excited to announce..."

### Independent

First person singular. One builder, around a day job, answering to nobody.

Never: "our team", borrowed logos, fake testimonials.

### Builder-first

Shows the working thing. Verbs and numbers over adjectives.

Never: "passionate", "innovative", "cutting-edge".

**Is / is not**

| Is | Is not |
|---|---|
| Specific: "Built for Patients · 2026" | Generic: "Healthcare solutions" |
| A live link and the source | A mock-up of something that doesn't exist |
| First person, dated, signed | An anonymous "we" |
| Quiet: paper, ink and one clay | Loud: gradients, neon, stock photos |
| Honest status: "headed for the app stores" | "Launching soon" with no date |
| A notebook that happens to be beautiful | A showreel that happens to have notes |

# 1.5 Evolution

The colours, type and voice stay exactly as they were. What changes is the symbol. A letter only said the name; the new mark says what the site is about.

Before: the "f." tile · retired

**Now: the half-pixel mark**

| Where | Before | Now |
|---|---|---|
| Symbol | Serif "f." on an ink tile | Half-solid, half-pixel circle with one clay line |
| Site header | Wordmark, with the tile beside it | Primary lockup: mark and wordmark |
| Favicon | The "f." tile | Ink tile with the 32 and 16 px cuts |
| Share cards | Tile, plus a large faint "f" in the corner | Lockup top left, no watermark |
| Clay | The dot of the "f." | The mark's line and the wordmark's full stop |

**The rule**

The "f." tile is retired. Don't use it in anything new, and replace it wherever it still shows: favicons, share cards, avatars. The marks drawn while the logo was being explored (light through a prism, connected dots, a cracked wall, a branching line, a minimal 13-cell cut) were never released and are not to be used either.

PART 02

# System

The visual and verbal toolkit the site is built from, specific enough to build without asking.

## 2.1 Principles

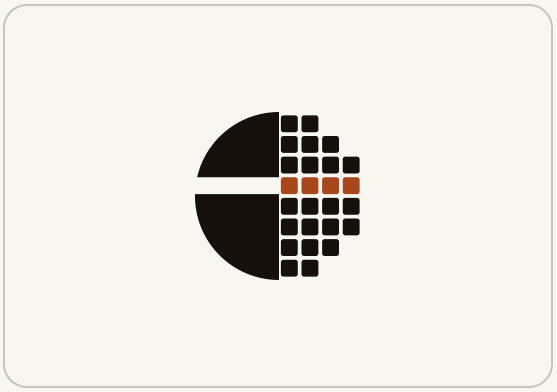

Five rules with teeth. Each one comes with a check you can run on any finished page in a few seconds.

| | | |
|---|---|---|
| 01 | The work goes first. | Every page leads with something built: a live link, a screenshot or a recording, before any opinion. **Check:** the first screen shows a build or the way to one. |
| 02 | Clay is the full stop. | Clay lives in the logo only: the mark's line and the wordmark's full stop. Everything else is ink on paper. **Check:** clay on a link, a button, a heading or a chart is a mistake. |
| 03 | Paper and ink, nothing loud. | Two neutrals carry everything. No gradients, no drop shadows; hairline rules and soft fills instead of heavy boxes. **Check:** there is no box-shadow anywhere in the code (true today; keep it true). |
| 04 | Every claim has a link. | Numbers, tools and results point to where they can be checked: the live app, the source, the filter that shows the count. **Check:** a number with nowhere to click is a bug. |
| 05 | Motion confirms, never performs. | Things rise into place once, on one ease. Only the marquee loops, and it stops when you point at it. **Check:** once a page settles, nothing else moves. |

# 2.2 Logo

A summary. The logo guide has the full construction, every version, the misuse gallery and the files; when the two disagree, the logo guide wins.

**What it is.** One circle split down the middle. The smooth left half is thinking; the pixel right half is building; the seam is the wall between them. One line of curiosity cuts through the thinking, crosses the wall and carries on as a row of clay pixels.

| | |
|---|---|
| Models | Primary lockup (default), stacked lockup, mark, wordmark |
| Colours | Ink + clay #A8471B on paper; paper + clay #E67E54 on dark; or one colour |
| Clear space | A quarter of the circle's diameter on every side |
| Minimum size | Mark 16 px on screen, 5 mm in print. Lockup: mark box 24 px or 7 mm; below that, the mark alone |
| Drawings | Master from 48 px; 32 px cut for 24–47 px; 16 px cut below 24 px |

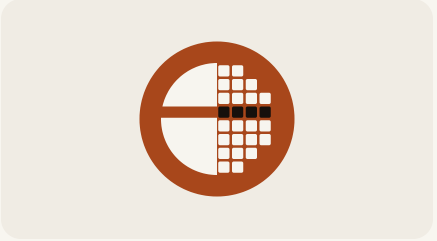

### Three things never to do

× Mirror it. Thinking stays on the left.

× Add clay pixels. One line, one row.

× Put it in a coloured circle or badge.

# 2.3 Colour

Warm paper and warm ink, one clay, one red for errors. Every colour is a token in `src/styles.css`, written in OKLCH; the hex values below are their sRGB equivalents. Use tokens in code, never raw hex.

| Token | Role | Light theme | Dark theme |
|---|---|---|---|
| `paper` | Page ground, card ground | #F8F6F0 | #0F0A06 |
| `paper-deep` | Quiet panels, tags, hover fills | #F0ECE4 | #16100C |
| `ink` | Headings, primary text, primary button | #16100C | #F7F5EF |
| `ink-soft` | Body copy, button hover | #38322D | #C1BDB7 |
| `ink-mute` | Meta, captions, kickers, counts | #6E6762 | #847F7A |
| `rule` | Hairlines and borders, 1 px | #C6C4BE | #25211D |
| `accent-ink` | Clay. The logo's line and full stop, nothing else | #A8471B | #E67E54 |
| `mark-dot` | Clay on a tile of the opposite theme (favicon, avatar) | #E67E54 | #A8471B |
| `destructive` | Errors only | #BB0916 | #BB0916 * |

* Not redefined for dark, and it fails there (3.0 : 1). A replacement is listed under Open decisions.

### Rules

**Clay is logo only.** Never a link colour, a button, a highlight, a chart series or a heading.

**Each clay keeps its ground.** #A8471B on light, #E67E54 on dark. Swapping them fails contrast.

**Rules are decoration.** A hairline (1.6 : 1) is never the only thing that shows where a control is; the label or fill does that.

**Red means an error.** Never decoration. There is no success or warning colour yet, because nothing needs one.

**The grain stays faint.** The page carries a 3 px dot texture of ink at 6%, shown at 40%. Never stronger, never on images.

**Dark is a theme, not a brand.** Same tokens, swapped values. Design in light; check every screen in dark.

# 2.4 Accessibility

Target: WCAG 2.1 AA. Every ratio below was computed from the tokens, not estimated. AA needs 4.5 : 1 for text and 3 : 1 for large text and controls.

| LIGHT THEME | | |
|---|---|---|
| Ink on paper | 17.5 | AAA |
| Ink soft on paper (body) | 11.7 | AAA |
| Ink mute on paper (meta) | 5.1 | AA |
| Ink mute on paper deep | 4.7 | AA |
| Ink soft on paper deep (tags) | 10.7 | AAA |
| Paper on ink (button) | 17.5 | AAA |
| Paper on ink soft (hover) | 11.7 | AAA |
| Error red on paper | 6.1 | AA |
| Rule on paper | 1.6 | Deco |

| DARK THEME | | |
|---|---|---|
| Ink on paper | 18.1 | AAA |
| Ink soft on paper (body) | 10.5 | AAA |
| Ink mute on paper (meta) | 5.0 | AA |
| Ink mute on paper deep | 4.8 | AA |
| Ink soft on paper deep (tags) | 10.1 | AAA |
| Paper on ink (button) | 18.1 | AAA |
| Focus ring (ink) on paper | 18.1 | AAA |
| Error red on paper | 3.0 | Fails |
| Rule on paper | 1.2 | Deco |

"Deco": decoration only, never the sole sign of a control. Dark error red needs a new value; see Open decisions. Never set ink mute below 12 px, and never put clay #E67E54 on a light ground (2.6 : 1).

### Requirements

| | |
|---|---|
| Tap targets | 44 px minimum height for buttons, filter chips and links that act as buttons; the back-to-top button is 44 × 44. |
| Focus | A visible 2 px ring in ink (17.5 : 1) on every interactive element, keyboard only (focus-visible). Never remove an outline without this ring. |
| Skip link | "Skip to content" is the first stop in the tab order on every page. |
| Reduced motion | Honour the OS setting: the marquee stops, smooth scrolling and transitions switch off, videos show their poster. |
| Images and video | Screenshots get alt text saying what they show; decorative drawings get empty alt. Explainer videos are muted, with their captions as real text beside them. |
| Structure | One h1 per page, headings in order, filter state announced (aria-current on the active chip, a live count). |

# 2.5 Typography

Aa *Aa*

**Instrument Serif · display**
Regular 400 and italic. Titles, names, kickers, pull quotes. One weight only: never bold it, never fake-bold it.

Aa 400 · 500 · **600**

**Inter · text and interface**
Body, buttons, labels, meta. Set with features ss01 (open digits) and cv11 (single-storey a), as the site does.

Both self-hosted through @fontsource. Fallbacks: `"Instrument Serif", ui-serif, Georgia, serif` and `"Inter", ui-sans-serif, system-ui, sans-serif`. No third typeface; numbers in tables use Inter's tabular figures.

### Scale, as built

| Role | Sample | Desktop / phone | Leading |
|---|---|---|---|
| Hero display | For the tech. | 128 / 13vw | 0.88 |
| Page title · h1 | Selected pieces. | 72 / 48 | 1.02 |
| Section title · h2 | Made for someone. | 60 / 48 | 1.0 |
| Essay subhead · h2 | The True Moat | 36 / 30 | 1.1–1.2 |
| Card title · h3 | Doomscholar | 36 / 36 | 1.0 |
| Kicker | *The Curious Issue — Vol. I* | 20 / 18 | 1.4–1.55 |
| Lead · body large | Documenting what happens... | 18 / 16 | 1.625 |
| Body | Around a full-time job and family... | 16 / 16 | 1.625 |
| Interface | See the builds | 14 / 14 | 1.4 |
| Meta · caption | 16 builds · Afsal Ali · Dubai | 12 / 12 | 1.33 |

Sizes in px, from the Tailwind classes in use. Samples here are scaled down to fit the page.

**Serif for titles, sans for information.** If you read it as a name or a headline, serif. If you read it to find something out, Inter.

**Headlines end with a full stop.** "Selected pieces." "Say hello." Short, declarative, finished.

**Long reads stay narrow.** 60–75 characters a line; body never under 16 px; nothing on the page under 12 px.

# 2.6 Imagery

The site shows the real thing or a drawing, and nothing in between. Three kinds of image are allowed, each with its own frame.

Phone recording

Desktop or terminal recording

Line drawing

| | |
|---|---|
| **Product footage** | Real screen recordings: phone for phone products, desktop for web tools, terminal for command-line tools. 12–20 s silent loop, 4–6 steps of 2.5–4 s, one HTML caption per step (4–9 words, present tense). Budget: 1.2 MB phone, 2 MB desktop, 120 KB poster. Only Nadan Chayakada keeps sound, muted until tapped. |
| **Frames** | Phone: 300 px wide on the page, 2.25 rem corners, an 8 px ink border, no notch or status bar. Desktop: 8 px corners, 1 px rule border, no fake browser chrome. |
| **Screenshots** | Real interface at real size, cropped to the content. Never stretched, never retouched to show a feature that isn't there. |
| **Drawings** | One-weight ink line on a transparent ground, inverted in the dark theme. Used for jokes and confessions, never to explain a product. |
| **Never** | Stock photos, AI-generated pictures of people, glowing gradients, laptop-on-a-desk mock-ups. |

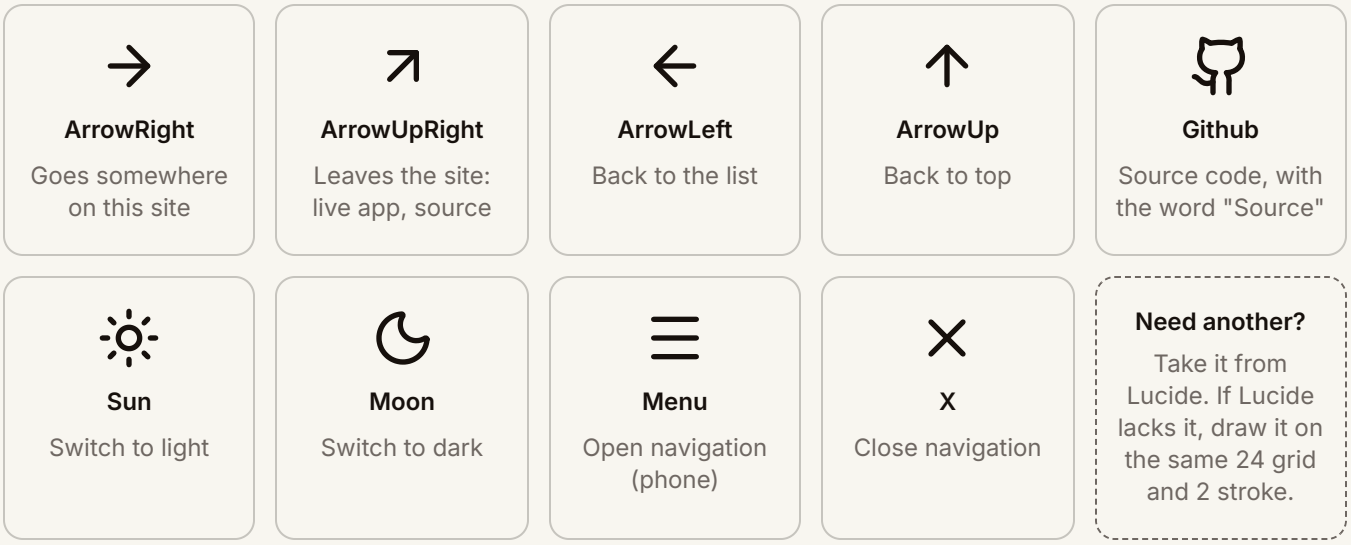

kinē

Interactive 3D physio guide.

**When there's no footage yet:** use the typographic card. The project name in Instrument Serif and its one-line blurb in Inter, on paper deep, laid out like the share card. Never a grey box, a blurred screenshot or a stock image.

# 2.7 Iconography

Few icons, all from Lucide, all doing a job. The whole set in use today is below; that is the starter kit, not a menu to decorate from.

| | |
|---|---|
| Construction | Lucide (lucide-react): 24 px grid, 2 px stroke, round caps and joins, no fills. Never mix in another icon set. |
| Sizes | 16 px beside text, 20 px for menu and close, 12 px inside small inline links. An icon-only button still gets a 44 px hit area. |
| Colour | The colour of the text beside it: ink or ink mute. Never clay. If an icon ever shows an error, it is error red and has a text label. |
| Meaning | ArrowRight stays on the site; ArrowUpRight leaves it. Never swap them; people use them to know where a click goes. |
| Motion | On hover, arrows nudge 4 px in their own direction (ArrowUpRight 2 px up and right). Nothing else moves. |
| Labels | Icon-only buttons (menu, close, theme, back to top) carry an aria-label that says the action. |

# 2.8 UI atoms

The pieces every page is built from, drawn at real size. One primary button per view: it is the thing the page most wants you to do.

BUTTONS

See the builds →

The Thesis

Primary: ink fill, paper text. Secondary: paper fill, 1 px rule border. Both 44 px tall, 20 px side padding, 6 px corners, Inter 14 / 500.

FILTER CHIPS

All builds 16

Live on the web 13

Pills, 44 px tall, with a count. Active: ink fill. Others: paper deep, ink soft. The filter lives in the URL.

PROJECT CARD

Built for Learning 2026

## Doomscholar

A latticework of powerful ideas: an audio-narrated, cross-linked map with spaced repetition.

Read the case study →

8 px corners, 1 px rule, 24 px padding, no shadow. Hover: paper deep at 60%.

TAGS, CHIPS, BADGES

2026 Built for Patients

Spotlight Build

React TypeScript Tailwind CSS

2026 ↑

Meta: pills on paper deep. Spotlight: ink pill. Stack: 6 px chips with a rule. Year: 2 px badge. Back to top: 44 px circle.

### Tokens

Radius
2 · 4 · 6 · 8 px, and full for pills. Base token 0.5 rem.

Borders
1 px rule. Pull quotes: a 2 px ink rule on the left.

Shadows
None, anywhere. Depth comes from fills.

Spacing and width
Tailwind's 4 px scale. Pages max 1152 px wide, 24 px side padding (40 on tablet up).

# 2.9 States, errors and empty pages

| | Default | Hover | Keyboard focus | Pressed | Disabled |
|---|---|---|---|---|---|
| **Primary** | Open live | Open live | Open live | Open live | Open live |
| **Secondary** | All work | All work | All work | All work | All work |
| **Filter chip** | Open source | Open source | Open source | Open source | Not used |
| **Text link** | Read the essay | Read the essay | Read the essay | Read the essay | Not used |

Drawn smaller to fit; real buttons and chips are 44 px tall.

**Hover** changes the fill, 150 ms. Cards fill with paper deep at 60%; arrows nudge (2.7).

**Focus** is a 2 px ink ring on keyboard focus only. On ink buttons, put 2 px of paper between the button and the ring so it shows.

**Pressed** holds the hover look; the active filter chip turns ink and stays ink.

**Disabled** isn't used today. If needed: paper deep fill, ink mute text (4.7 : 1), no hover, aria-disabled. Never fade with opacity.

### When something is missing or broken

404

Not in the ledger.

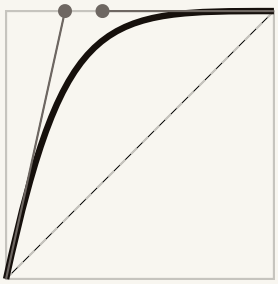

This page doesn't exist, or it moved when the site split into pages.

Home | All work

| | |
|---|---|
| **The pattern** | Say what happened in one dry line, then offer two ways out. No "Oops", no apology, no exclamation mark. |
| **Page not found** | As shown: "Not in the ledger." Home and All work. |
| **Empty filter** | "Nothing here yet." and a Show all builds button. The count reads "None of sixteen shown". |
| **Video won't load** | Show the poster still; no poster, the typographic card (2.6). |
| **Live app is down** | Swap Open live for an "Offline for now" note and keep the case study. Never link to a dead page. |

# 2.10 Motion

Motion confirms that something arrived or responded. It happens once, on one ease, and then the page is still.

**The ease**
`cubic-bezier(0.22, 1, 0.36, 1)`
Quick to arrive, slow to settle.

| Interaction | Duration | What moves |
|---|---|---|
| Hover | 150 ms | Fill colour only (Tailwind's default curve) |
| Arrow nudge | 150 ms | 4 px in the arrow's direction |
| Headline reveal | 0.8 s | Hero words slide up out of their own clip box, on first paint |
| Section enter | 0.8 s | Fade in and rise 40 px, once, 100 px before it scrolls into view |
| List enter | 0.8 s · 0.08 s | Items rise 30 px, each 0.08 s after the last |
| Marquee | 40 s loop | Linear scroll; pauses on hover and keyboard focus |
| Logo | 1.2 s, once | The line cuts in, the row is built (logo guide, 07) |
| Route change | None | Pages swap instantly; sections then enter as above |

**REDUCED MOTION**

When the visitor's system asks for less motion, everything stops: no reveals, no marquee, no smooth scrolling, no logo animation, and videos show their poster with a play button. Content is simply there.

**NEVER ANIMATE**

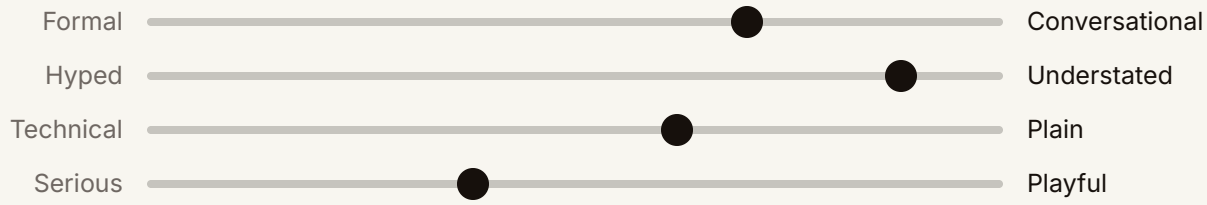

Numbers and counts (no count-up). Screenshots and videos (no parallax, zoom or tilt). Text inside an essay's reading column. The logo anywhere but the home page and the 404. Anything on a loop, except the marquee.

**Why so little.** The site is about things that were built. Motion that performs pulls attention away from them; motion that confirms tells you the page is alive and then gets out of the way.

# 2.11 Voice

## Write like someone standing next to the thing they built, not someone pitching it.

### Where the voice sits

Plain by default; technical only under "How it was built". Mostly serious, with room for a confession or a joke about posture.

**Curious** → asks the question first, and says what isn't known yet.

**Independent** → "I", never "we". One person's view, owned.

**Builder-first** → verbs, numbers and names of real things.

### We say / we don't

| | |
|---|---|
| Made for someone. | Solutions for every need. |
| Built for Patients · 2026 | Empowering healthcare with AI. |
| 16 builds · Afsal Ali · Dubai | A passionate full-stack innovator. |
| Not in the ledger. | Oops! Something went wrong! |
| Tech is never the moat. What it alters in someone's real, physical day is. | Leveraging cutting-edge AI to disrupt the industry. |
| Say hello. | Let's connect and explore synergies! |

# 2.12 Language mechanics

| | |
|---|---|
| **The name** | forthe.tech, all lowercase and one word, even at the start of a sentence. Never "Forthe.tech", "ForThe.Tech" or "For The Tech". |
| **Person** | First person singular: "I built", "I test". Never "we" or "our team". |
| **Spelling** | British English: catalogue, colour, honour. Code and product names keep their own spelling. |
| **Case** | Sentence case for headings, buttons, labels and filters: "See the builds", "Live on the web". |
| **Punctuation** | Headline statements end with a full stop. No exclamation marks, ever. Em dashes for asides in prose; a middle dot with spaces between pieces of metadata: "Built for Patients · 2026". |
| **Numbers** | Numerals for counts, years and sizes in metadata and stats ("16 builds"). Words inside interface sentences ("Six of sixteen shown"). |
| **Product names** | Exactly as their maker wrote them: kinē, NxtDoorChef, JobHunter OS, GTM-OS, Medical Coding Mastery. |
| **Links** | Say where they go: "Open live", "Source", "Read the case study". Never "click here" or "learn more". |
| **Banned words** | Passionate, innovative, cutting-edge, revolutionary (except in quotes, as on the About page), leverage, synergy, solutions, empower, seamless. No emoji on the site. |

### Voice in context

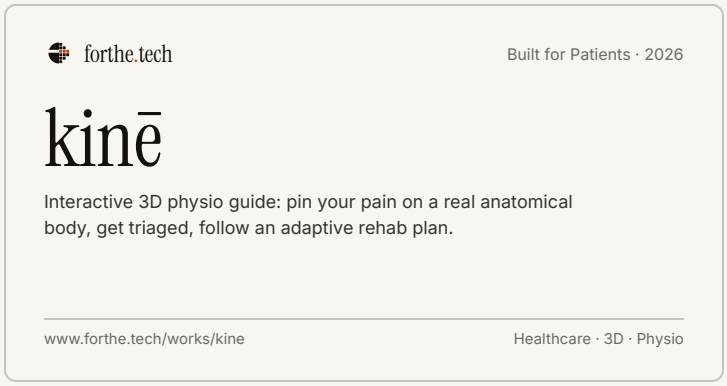

Same person in every room; the volume changes.

| Where | How it sounds | Example |
|---|---|---|
| Home | One declarative line, then the facts. | For the tech. |
| Project page | Problem first, plain words; technical detail only under "How it was built". | Why this exists. |
| Dispatch | Long, personal, allowed to be philosophical, but every big idea lands on a real example. | It also arrives with an unspoken debt. |
| Errors | Dry, one line, two ways out. | Not in the ledger. |
| LinkedIn | One build, what it does for whom, one link. A few hashtags at most, at the end. | "Built a 3D physio guide for patients. Live at forthe.tech/works/kine" |
| Contact | A direct invitation, no form-letter warmth. | Say hello. |

# 2.13 Templates

Three things get made again and again. Build them from these structures; don't design them fresh each time.

### Share card · 1200 × 630, one per page

Paper ground, 64 px top and bottom, 72 px sides. Lockup top left (mark box 50 px, wordmark 40 px); kicker top right in Inter 22 / 500, ink mute. Title in Instrument Serif, 104–150 px by length, leading 0.95; one line of Inter 28 px, ink soft. A 2 px rule, then the URL left and three facts right, Inter 22, ink mute. Light only; no watermark. Shown at 30%.

### Project page

2026 · Built for Patients · Spotlight Build

Name

One-line blurb: what it does, for whom.

Open live · Source

Explainer video or screenshot

Why this exists.

The problem, one paragraph.

How it was built.

The approach, then highlights as a dotted list.

Stack · chips

# Open decisions

| | |
|---|---|
| **Dark-theme error red** | #BB0916 is 3.0 : 1 on the dark ground. Proposed: oklch(0.66 0.19 27), #F0574E, which is 5.8 : 1 on #0F0A06 and 5.5 : 1 on #16100C. |
| **Success and warning** | None defined. Add them only when a real state needs one, and check contrast in both themes. |
| **Forms** | The site has none; contact is an email link. If one is added: 44 px fields, 1 px rule border, 2 px ink focus ring, label above in Inter 14 / 500, error text in red below the field. |
| **Print colour** | No Pantone matches yet. CMYK figures in the logo guide are starting points for a proof. |
| **Not built yet** | The logo animation (logo guide, 07), the explainer videos (spec in EXPLAINERS.md) and dark share cards. |

### What the site needs to change

1. Swap the "f." tile for the new mark: header, favicons, home-screen icon, share cards.
2. Drop the "f" watermark from share cards.
3. Featured cards show ArrowUpRight for live builds but open the case study; use ArrowRight.
4. Give primary buttons a 2 px paper gap before the focus ring.
5. Add the dark-theme error red.

### Left out on purpose

**Arabic and right-to-left:** the site is English only; PharmaRab and PhysioArab handle Arabic inside their own products.
**A second product surface:** there is one site.
**Print and physical:** nothing is printed yet; minimum print sizes are in the logo guide.

# Changelog

| | |
|---|---|
| **v1.0 · 21 Oct 2026** | First release. Part 01, Brand (1.1–1.5); Part 02, System (2.1–2.13); open decisions. Written from the site's own code as it stands (tokens, components, motion, copy) and the final half-pixel logo, which replaces the "f." tile. |
